

FEATURES

- Patented Volume Plus Button designed with features for the hearing impaired aiding 70% of elderly guests with high-frequency hearing loss (the Boost Button increases volume range to 27.5db)
- SIP / IAX Compatible
- Built in CLEARING AID[®] circuitry automatically adjusts frequency response for improved clarity. This is an aid to 70% of guests with high-frequency hearing loss.

The TL-IP from Inn-Phone is an industry first!! The TL-IP is the first SIP enabled product in a compact trim line design. The familiar packaging provides users with a simple to use device without the confusing and overwhelming number of options and functions that dominate most IP telephone designs

The TL-IP comes with Inn-Phone's unique Heavy Base electronics enclosure. The Heavy Base design helps minimize breakage as compared with lighter phones that can more easily be dragged from desks and workspaces resulting in breakage and more frequent replacement.

The TL-IP, like all Inn-Phone hotel products, comes with free customized face plates (minimum order applies) and face plates can typically be completed and shipped in less than 24 hours after design approval. The TL-IP meets hospitality room telephone standards and exceeds ADA requirements for volume boost.

Available in black or cream, the TL-IP can be used in desk top or wall mount applications. The TL-IP is the ideal choice for an economical IP solution that is easy to use and configure, yet provides Inn-Phone's trade mark reliability as a courtesy phone or service phone for hotel guests and staff.
